Operating system installation

Tasks

1. Download the latest Ubuntu Desktop ISO image and create a bootable USB drive using Rufus or Balena Etcher.

Ans. :-

Steps using Rufus :-

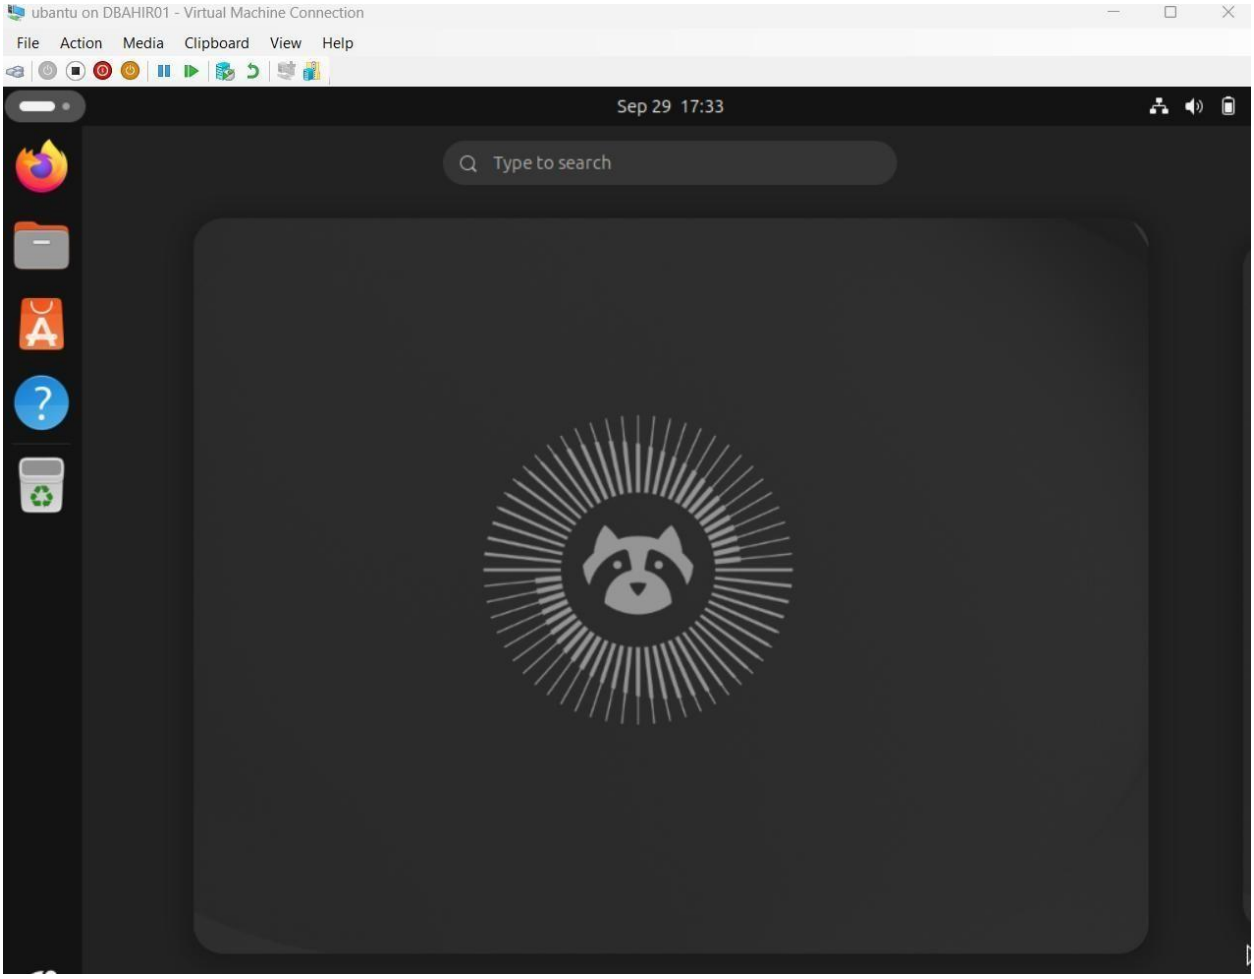

1. **Download Ubuntu ISO**
    - Open the Ubuntu download page.
    - Download Ubuntu 26.04.1 LTS Desktop 64-bit.
    - Save the .iso file to your computer.
2. **Connect USB**
    - Insert an 8 GB or larger USB drive.
    - Back up any important files, because creating the bootable USB will erase the USB.
3. **Open Rufus**
    - Run rufus-4.15.exe.
    - Under Device, select your USB drive.
    - Under Boot selection, click SELECT.
    - Choose the downloaded Ubuntu .iso file.
4. **Select settings**
    - Partition scheme: GPT
    - Target system: UEFI
    - File system: FAT32 (if Rufus offers it)
    - Click START.
5. **Confirm**
    - If Rufus asks about ISO Image mode, select ISO Image mode (Recommended).
    - Confirm that you want to erase the USB.
    - Wait until the progress reaches 100% / READY.

6. **Safely eject**

    - Close Rufus.
    - Safely eject the USB drive.

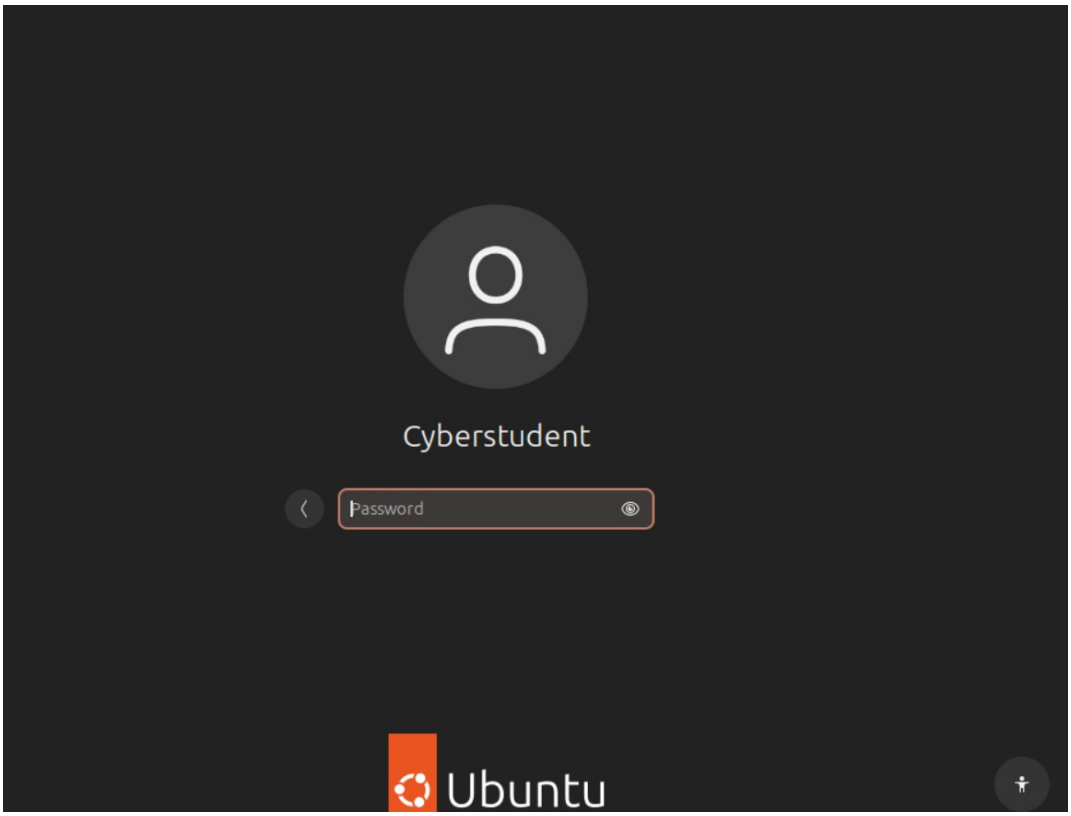

2. Install Ubuntu Desktop on a virtual machine using VirtualBox or VMware Player, and take a screenshot of the desktop after successful installation.

Ans.:-

3. During installation, set up a user account named 'cyberstudent' with a strong password (at least 8 characters, mix of letters, numbers, and symbols).

Ans.:-

4. After installing Ubuntu, open the terminal and run the command 'uname -a' to display OS details. Save the output to a text file named os-info.txt.
